

A

m = no. of **D/E** besides those at positions +1 and +3
 μ_{01} = 'forward' mutation rate (i.e. addition of **D/E**)
 μ_{10} = 'reverse' mutation rate (i.e. removal of **D/E**)
 Φ_{01} = 'forward' probability of fixation (i.e. fixation of **D/E** gain)
 Φ_{10} = 'backward' probability of fixation (i.e. fixation of **D/E** loss)
